## **AQUATICLEAR KASCO WATER CIRCULATORS AND RETROFIT KITS PRICING**

WLCA, through its herbicide contractor, has offered KASCO Marine Water Circulators for purchase by both WLCA members and non-members alike. In 2021, KASCO introduced a new, clog-resistant model of its popular circulator and a convenient retrofit guard kit for its older models. KASCO has discontinued the manufacture of its prior models. Older models may be found on Amazon or other Marine Supply websites.

The descriptions and pricing included here are for both the KASCO AquatiClear Water Circulator and Retrofit Kits. The 2025 pricing is for “drop ship” delivery of the equipment to the purchaser’s location. Due to the wide disparity in depths at the site of operation, the circulators are drop shipped with everything needed for installation except a 1½” galvanized pole onto which the circulator may be mounted. Threaded galvanized poles of this dimension are readily available at local hardware stores and may be cut to any length required. Please see the two-part installation video on You Tube, <https://www.youtube.com/watch?v=BwofsRrhNio>.

Both the older and new models of KASCO circulators are electric powered surface water movers that can be affixed to a pier or other structure. 120- and 240-Volt models are available and require a professionally installed, grounded electrical connection with a breaker near your seawall for installation. Your choice of various electrical cord lengths is offered. When activated, the circulator sets up a current of water that helps improve water quality and move weed chop and duckweed away from your shoreline out into the lake where wind and water action can help dissipate it. 3/4 or 1 horsepower, 120-Volt models are adequate for this lake. Bigger is better.

Weed Chop, Duckweed, and stagnant water are an unfortunate part of lake-front living. At the request of WLCA members, the Association searched for a mechanical means to help keep shorelines clear of weed chop and duckweed. The water circulator was one of the more affordable solutions found to keep the water moving and help mitigate this problem. Additional remedies to improve water circulation can be found on our website.

There are currently more than 20 water circulators in use on Webster Lake. If you would like to see one in operation, please contact Webster Lake Conservation Association through the “Contact Us” button on our Web page at <http://www.lakewebster.net/contact.php> to arrange for a demonstration.

**2025 pricing through Aquatic Weed Control for the new AquatiClear Water Circulator and the Retrofit Kit is shown below.**

If you are not already a member of WLCA, please consider joining the Association. Association efforts are focused on keeping the lake clean and safe for fishing, swimming and boating and encouraging the property owners and members to work together for the improvement of the lake to make the region healthful, restful and attractive for the benefit of all.

***WLCA is classified as a 501(c)(3) organization. Your donations are tax deductible to the extent allowed by law.***
